	Lost Alamos	Taos

What is blade-free LASIK?

The IntraLase Method is a 100% blade-free technique used to perform the critical first step in the LASIK procedure: creating the corneal flap. The creation of the corneal flap prepares the eye for the second step of the LASIK procedure, where an excimer laser is used on the inner cornea to correct vision.

Is blade-free LASIK right for me?

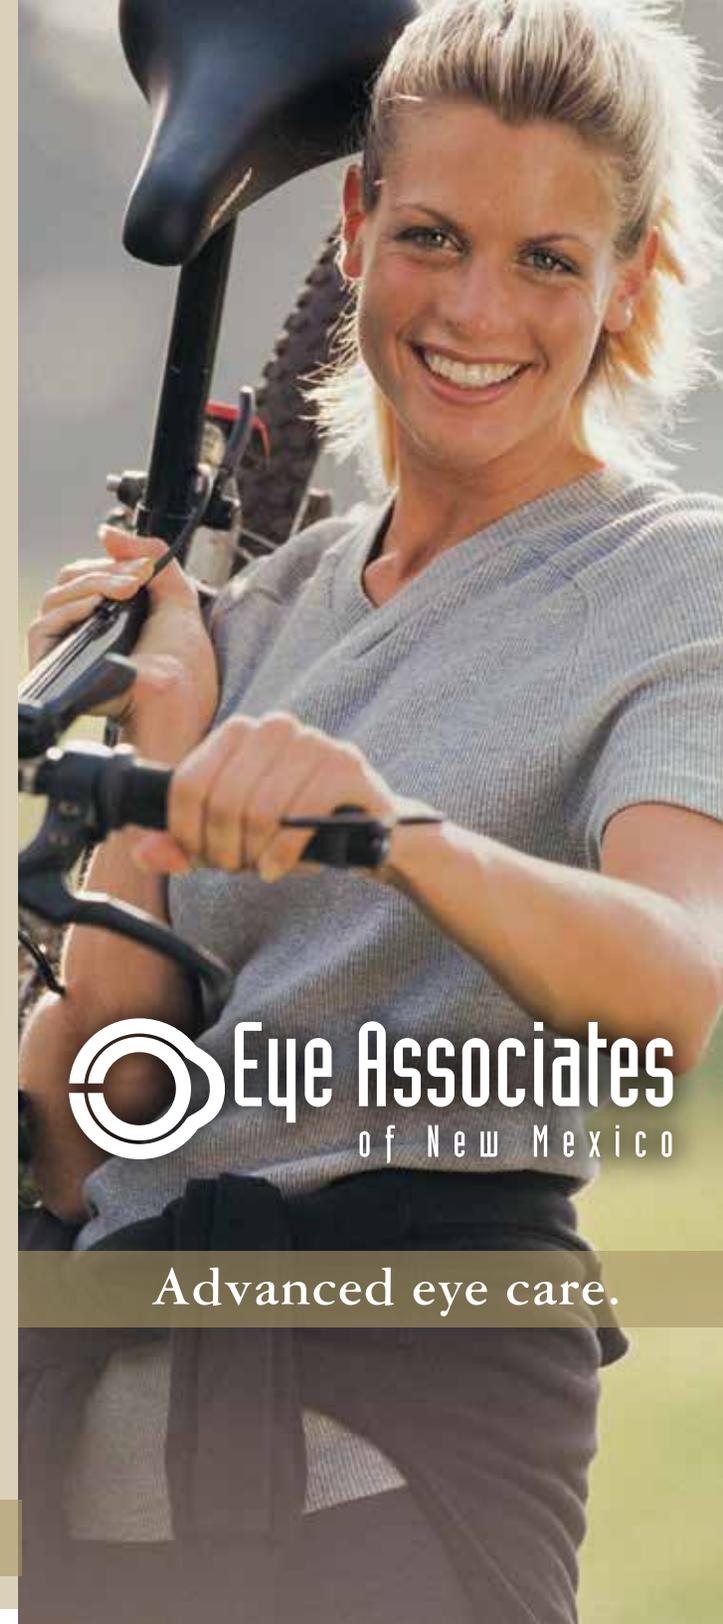

LASIK improves vision safely and precisely by reshaping the cornea to correct nearsightedness (myopia), farsightedness (hyperopia) and astigmatism. Vision improves within minutes, and most patients eventually enjoy 20/20 vision or better after treatment.

The most commonly performed elective surgery in America, LASIK combines the advantages of two sophisticated technologies: the accuracy of the excimer laser and the benefits of lamellar keratoplasty. It is safe, precise and highly successful. Thanks to LASIK, millions of people worldwide have experienced the wonder of clear vision and have reduced their dependency on eyeglasses or contact lenses.

We will help you find the best outcome for your lifestyle.

At Eye Associates of New Mexico, we are dedicated to bringing you the most advanced and trusted LASIK technology. That's why we offer our patients blade-free custom LASIK.

Each individual person has extremely unique eyes. Not all people are candidates for the LASIK eye surgery procedure. No two cornea maps are the same just like with a DNA sample or fingerprint. This is why a pre-operative exam is absolutely necessary. Before LASIK is performed you will be required to undergo a series of diagnostic tests to determine the stability of your vision. After a thorough evaluation of your cornea, the doctors will be able to determine if you are a candidate. This thorough diagnostic evaluation is the first step in creating a positive outcome for your best possible visual outcome or personal best vision.

Schedule a FREE consultation if you are seeking to improve your vision please call our offices today to see if you qualify for a free vision correction screening. A thorough pre-operative eye health exam is the first step to determining what vision correction option would be right for you. Feel free to call us directly with any questions or concerns.
